## Summary

AI Automation Engineer and Full-Stack Developer with 2+ years of experience building AI-enabled web applications, CRM automations, API integrations, and internal operations tools for international clients. Strong hands-on background in TypeScript, Next.js, React, Node.js, Python, Supabase/PostgreSQL, and LLM integrations across OpenAI, Claude, and Gemini. Proven ability to automate multi-system workflows across GoHighLevel, SimPro, Zapier, n8n, Slack, and Google Workspace, including systems that save 25+ hours per week in administrative work.

## Education

**POLYTECHNIC UNIVERSITY OF THE PHILIPPINES** Batangas, Philippines

*Bachelor of Science in Information Technology*

- Magna Cum Laude
- Member of Google Developer Student Clubs
- Full Stack Developer Volunteer in school organizaitons

## Work Experience

**AVEBA DIGITAL** Marikina City, Philippines (Remote)

*GHL AI Tech Specialist* June 2026 - November 2026

- Own GoHighLevel AI automations and backend operations for 10+ client sub-accounts and 200+ active workflows, resolving 130+ support tickets per month across pipelines, calendars, lead routing, opportunity tracking, and automations, with same-day resolution on most tickets.
- Build, repair, and QA production automations for call dispositions, appointment status changes, reminders, and post-consult follow-ups, reducing missed appointments and no-shows by 30–40% across client accounts.
- Rebuild CRM field mappings and webhook integrations between Retell AI, forms, and GoHighLevel, cutting duplicate and mismatched contact records by ~40% and closing lead leakage between call and CRM.
- Automate task assignment, lead handoffs, and status updates that were previously done by hand, saving clients and the internal team 15+ hours per week.
- Engineer an AI-assisted diagnostics workflow connecting Claude to GoHighLevel via the API and MCP, letting AI navigate sub-accounts, read workflow and logs, and pinpoint broken triggers, field mappings, and automations for faster root-cause analysis and scoped fixes.
- Train newly hired junior tech specialists on AI-assisted workflows using Claude, the GHL API, and MCP, reducing manual troubleshooting and helping them ramp up faster.

**STERK SYSTEMS** Netherlands (Remote)

*Web Developer* November 2025 - June 2026

- Designed and shipped 10+ high-converting, responsive websites for local service companies across the Netherlands using Next.js and Tailwind CSS, with an average delivery time of 1 week per site.
- Optimized page performance and Core Web Vitals through image compression, lazy loading, and code splitting, reaching 90+ Lighthouse scores and cutting page load times by ~40% on mobile and desktop.
- Applied UI/UX design principles (visual hierarchy, clear calls-to-action, mobile-first layouts, consistent spacing and typography) to redesign hero sections and service pages, lifting quote-request conversions by ~20% across client sites.
- Implemented local SEO foundations (Google Maps embeds, structured data, location-based service pages), helping clients reach first-page local search rankings for priority service keywords.
- Built CRM-connected booking and quote forms that route leads straight into client pipelines, saving ~5 hours per week of manual intake and increasing form submissions by ~25%.
- Gathered and acted on client and end-user feedback through iterative review cycles, turning revision requests into faster, better-aligned releases.

**THE FAMILY ROOFING COMPANY** Leeds, United Kingdom (Remote)
*AI and Automation Developer* Mar 2026 – Jun 2026

- Led business process mapping and audited manual workflows across sales, scheduling, invoicing, and customer service, identifying automation opportunities that went on to save 25+ hours per week of admin work.
- Audited the company's AI and software stack and cancelled 3 redundant, overlapping AI tool subscriptions, cutting ~£800/year in operating expenses with no loss of functionality.
- Built and maintained 5+ production GoHighLevel workflows and API integrations linking GoHighLevel, SimPro, Zapier, WhatsApp, SurveyMonkey, SMS, and email, cutting lead response time from hours to minutes; tested webhooks, monitored live runs, and documented 5 core system processes for handoff.
- Automated document processing, invoice processing, and invoice reminders, replacing manual data entry, saving ~10 hours per month, and ensuring every reminder went out on schedule.
- Managed and tailored AI conversation flows across 5 channels (web chat, WhatsApp, SMS, Facebook, and Instagram), scripting tone, FAQs, and qualification and handoff logic so the AI answered first-line inquiries 24/7 and passed qualified leads to staff.
- Developed internal social media marketing tools that generate captions and schedule posts across 4+ platforms (LinkedIn, Instagram, Facebook, Google Business Profile), automating 10–15 posts per week and saving ~2 hours per week, alongside 10+ landing pages, funnels, and forms with QR tracking links.

**FREELANCE** Remote
*Full-Stack Software Developer* 2024 – Present

- Deliver production AI-enabled web apps and internal tools for international clients using TypeScript, Next.js, React, Node.js, Supabase, and PostgreSQL.
- Integrate OpenAI, Claude, and Gemini for image analysis, structured data extraction, content generation, and operations decision support, while automating cross-platform flows through webhooks, n8n, Make, and Zapier.
- Own end-to-end delivery from discovery and architecture through reliability controls, Vitest/Playwright testing, and deployment to Vercel/Railway.

**XURPAS INC.** Makati, Philippines
*Software Developer – ERPNext & Frappe Framework* Mar 2025 – Jun 2025

- Supported internal HRIS/ERP development using Frappe Framework, Python, JavaScript, and Jinja templates.
- Built dynamic form logic, frontend scripts, server-side validation, and custom print formats to improve HR data capture accuracy and usability.
- Partnered with senior engineers and QA teams to translate requirements into features, troubleshoot bugs, and prepare modules for production release.

# Projects

**JobPilot – AI Job-Hunting Assistant |** *Next.js 16, TypeScript, GPT-4o, Browserbase, InsForge*

- Built a full-stack AI job-search platform with Next.js 16 and TypeScript, integrating the Adzuna API to discover live listings and GPT-4o to score each job 0-100 against the user's profile with explainable match reasoning.
- Engineered a company-research agent using Browserbase + Stagehand to autonomously browse a company's public pages and synthesize a structured interview-prep dossier with GPT-4o, with deterministic fallbacks so it never fails or hallucinates facts.
- Implemented AI resume parsing and PDF generation (GPT-4o + @react-pdf/renderer) and a PostHog-powered analytics dashboard with real-time stats and charts.
- Designed a layered architecture on InsForge (Postgres) with OAuth auth and Row-Level Security, enforcing strict boundaries between agent logic, server actions, and UI.

**Echo AI – Voice AI Sales Coach Agent |** *Vapi, WebRTC, OpenAI API, Node.js*

- Developed a real-time Voice AI sales coach that runs mock sales calls and helps representatives practice pitch delivery, objection handling, and closing workflows.
- Built adaptive coaching personas and performance prompts for role-play scenarios aligned with high-conversion sales conversations.

**Quote Flow AI – Logistics Operations Console |** *Next.js, TypeScript, Supabase, OpenAI, Vitest*

- Built logistics ops console for customer intake, AI-assisted shipment parsing, rule-based quote generation, and Slack-based approval workflows.
- Designed finite-state order workflow and deterministic mock database fallback to keep demos fully runnable; achieved 32 passing Vitest tests and Playwright visual captures across critical UI states.

**RoofPost AI – Mobile Social Planner App** | *React, Vite, Tailwind CSS v4, Express, Claude Vision, Railway*

- Built mobile-first app that analyzes uploaded roofing photos with Claude Vision and generates localized British English social captions.
- Integrated GoHighLevel Social Planner API scheduling, reducing a 15-minute content workflow to under 60 seconds; added bearer-token validation, per-IP rate limiting, and /api/health monitoring.

**Marketing Asset Generator – Content Repurposer** | *Next.js, OpenAI API, Zod, Tailwind CSS v4*

- Built content repurposing app that converts long-form text into platform-ready formats for LinkedIn, X, TikTok, Instagram, and Facebook using shared Zod schemas for typed API responses.

# Honors & Awards

**AGORA VOICE AI HACKATHON (MANILA)** 2026

*2nd Runner-Up*

- Built and pitched a real-time AI Conversation Arena prototype using Agora ConvoAI, TRAE IDE, and AWS infrastructure out of 27 competing professional and student teams.

**PUP HACKATHON (UTHACK ANG PUHUNAN)** 2024

*Top 10 Finalist*

- Contributed to feature architecture research and rapid product development under strict competitive time constraints.

# Skills

**Languages:** TypeScript, JavaScript, Python, PHP, SQL, HTML/CSS

**Frontend:** React, Next.js App Router, Vite, Tailwind CSS v4, shadcn/ui, responsive web design

**Backend & APIs:** Node.js, Express, REST APIs, webhooks, bearer-token authentication, rate limiting, retry/backoff logic, health endpoints, structured errors

**AI & LLM:** OpenAI API, Anthropic Claude API, Google Gemini, AI agents, prompt engineering, structured outputs, Zod validation, vision/text workflows, AI parsing

**Automation & CRM:** GoHighLevel, Conversation AI, n8n, Make, Zapier, SimPro, Slack, Google Workspace, automated email/SMS/WhatsApp workflows

**Data, Cloud & QA:** PostgreSQL, Supabase, MySQL, SQLite, Vercel, Railway, Docker, Git/GitHub, Vitest, Playwright, CI/CD, debugging, technical support
