JAIRO N. CAPUA

+63 927 635 7943 • jairocapua.dev@gmail.com • LinkedIn • Portfolio • GitHub

Summary

AI Engineer and Full-Stack Software Engineer with 2 years of experience designing, building, and deploying AI-powered applications, LLM integrations, and AI agents for international clients. Proficient in Python, TypeScript, JavaScript, React, Next.js, Node.js, REST APIs, and PostgreSQL, with hands-on experience using the OpenAI, Anthropic Claude, and Google Gemini APIs. Skilled in prompt engineering, structured outputs, retrieval-augmented generation (RAG) with embeddings and vector search (pgvector), voice AI, and workflow automation (n8n, Zapier, GoHighLevel). Delivers production-ready software with Docker, CI/CD, automated testing (Vitest, Playwright), and cloud deployment (Vercel, Railway), including automations that save clients 25+ hours per week.

Education

POLYTECHNIC UNIVERSITY OF THE PHILIPPINES Batangas, Philippines
BS in Information Technology 2025

- Magna Cum Laude
- Full-Stack Developer for the Google Developer Student Club and PUP Computer Society

Experience

SEQUOYA AI Australia (Remote)
AI Developer Sep 2026 – Present

- Manage AI orchestration for the company's AI Operating System, designing multi-agent workflows where specialized agents communicate, share context, and hand off tasks, built on Claude, n8n, and AWS.
- Lead UI/UX improvements across the AI OS product, redesigning 5+ core flows and screens so non-technical business owners can use advanced AI features without feeling overwhelmed.
- Build and customize AI agents tailored to each client's business needs, such as lead handling, follow-ups, and customer support, for 10+ business owners and entrepreneurs.
- Develop internal tools for the AI OS and custom tools for clients using Next.js, Supabase, AWS, Claude, and n8n, shipping 5+ tools and features since joining.
- Cut load times across the AI OS app and internal tools by ~35% through code splitting, query optimization, caching, and asset compression, delivering a faster, smoother experience for clients.

AVEBA DIGITAL Philippines
GHL AI Tech Specialist Jul 2026 – Nov 2026

- Owned GoHighLevel AI automations and backend operations for 10+ client sub-accounts and 200+ active workflows, resolving 130+ support tickets per month across pipelines, calendars, lead routing, opportunity tracking, and automations, with same-day resolution on most tickets.
- Built, repaired, and QA'd production automations for call dispositions, appointment status changes, reminders, and post-consult follow-ups, reducing missed appointments and no-shows by 30–40% across client accounts.
- Rebuilt CRM field mappings and webhook integrations between Retell AI, forms, and GoHighLevel, cutting duplicate and mismatched contact records by ~40% and closing lead leakage between call and CRM.
- Automated task assignment, lead handoffs, and status updates that were previously done by hand, saving clients and the internal team 15+ hours per week.
- Engineered an AI-assisted diagnostics workflow connecting Claude to GoHighLevel via the API and MCP, letting AI navigate sub-accounts, read workflow and contact data, and pinpoint broken triggers, field mappings, and automations for faster root-cause analysis and scoped fixes.
- Trained newly hired junior tech specialists on AI-assisted workflows using Claude, the GHL API, and MCP, reducing manual troubleshooting and helping them ramp up faster.

STERK SYSTEMS Netherlands
Web Developer (Part-time) Jun 2026 – Present

- Design and ship high-converting, responsive websites for local service companies across the Netherlands using Next.js and Tailwind CSS, delivering 10+ sites at an average of 1 week per site.
- Optimize page performance and Core Web Vitals through image compression, lazy loading, and code splitting, reaching 90+ Lighthouse scores and cutting page load times by ~40% on mobile and desktop.
- Apply UI/UX design principles (visual hierarchy, clear calls-to-action, mobile-first layouts, consistent spacing and typography) to redesign hero sections and service pages, lifting quote-request conversions by ~20% across client sites.
- Implement local SEO foundations (Google Maps embeds, structured data, location-based service pages), helping clients reach first-page local search rankings for priority service keywords.
- Build CRM-connected booking and quote forms that route leads straight into client pipelines, saving ~5 hours per week of manual intake and increasing form submissions by ~25%.
- Gather and act on client and end-user feedback through iterative review cycles, turning revision requests into faster, better-aligned releases.

THE FAMILY ROOFING COMPANY Leeds, United Kingdom
AI Automation Developer (Part-time, Remote) Mar 2026 – Jun 2026

- Led business process mapping and audited manual workflows across sales, scheduling, invoicing, and customer service, identifying automation opportunities that went on to save 25+ hours per week of admin work.
- Audited the company's AI and software stack and cancelled 3 redundant, overlapping AI tool subscriptions, cutting ~£800/year in operating expenses with no loss of functionality.
- Built and maintained 5+ production GoHighLevel workflows and API integrations linking GoHighLevel, SimPro, Zapier, WhatsApp, SurveyMonkey, SMS, and email, cutting lead response time from hours to minutes; tested webhooks, monitored live runs, and documented 5 core system processes for handoff.
- Automated document processing, invoice processing, and invoice reminders, replacing manual data entry, saving ~10 hours per month, and ensuring every reminder went out on schedule.
- Managed and tailored AI conversation flows across 5 channels (web chat, WhatsApp, SMS, Facebook, and Instagram), scripting tone, FAQs, and qualification and handoff logic so the AI answered first-line inquiries 24/7 and passed qualified leads to staff.
- Developed internal social media marketing tools that generate captions and schedule posts across 4+ platforms (LinkedIn, Instagram, Facebook, Google Business Profile), automating 10–15 posts per week and saving ~2 hours per week, alongside 10+ landing pages, funnels, and forms with QR tracking links.

XURPAS INC. Makati, Philippines
Software Developer & QA Intern – ERPNext & Frappe Framework Mar 2025 – Jun 2025

- Supported internal HRIS/ERP development using Frappe Framework, Python, JavaScript, and Jinja templates.
- Built dynamic form logic, frontend scripts, server-side validation, and custom print formats to improve HR data capture accuracy and usability.
- Partnered with senior engineers and QA teams to translate requirements into features, troubleshoot bugs, and prepare modules for production release.

FREELANCE Remote
Full-Stack Software Developer 2024 – Present

- Deliver production AI-enabled web apps and internal tools for international clients using TypeScript, Next.js, React, Node.js, Supabase, and PostgreSQL.
- Integrate OpenAI, Claude, and Gemini for image analysis, structured data extraction, content generation, and operations decision support, while automating cross-platform flows through webhooks, n8n, Make, and Zapier.
- Own end-to-end delivery from discovery and architecture through reliability controls, Vitest/Playwright testing, and deployment to Vercel/Railway.

Projects

AIPM – AI-Native Project Management Platform | *Next.js 16, TypeScript, tRPC, PostgreSQL/pgvector, Claude API, Voyage AI, Docker*

- Building a ClickUp-style project management platform in a TypeScript monorepo with spaces, projects, list and board views, task drawers, comments with @mentions, and role-based sharing for admins, members, and guests.
- Engineered a multi-tenant permission layer enforced by a single policy and verified by a 500+ case permission matrix, backed by a Postgres outbox, idempotent background jobs (pg-boss), and least-privilege database roles.
- Built an AI gateway for Claude with tiered model routing, streaming, Langfuse tracing, and a budget governor that degrades AI features at 70/85/95/100% of a $20/month cap, plus an inspector showing the cost and sources of every answer.
- Built a hybrid search index (pgvector HNSW + Postgres full-text, Voyage AI embeddings) with chunking, incremental reindexing, and an embedding cache that rebuilds the index with zero re-embedding calls.
- Ships as a one-command Docker Compose stack with GitHub Actions CI (Vitest, Playwright E2E, secret scanning), built phase by phase with a multi-agent Claude Code workflow (plan, implement, verify, review).

JobPilot – AI Job-Hunting Assistant | *Next.js 16, TypeScript, GPT-4o, Browserbase, InsForge*

- Built a full-stack AI job-search platform with Next.js 16 and TypeScript, integrating the Adzuna API to discover live listings and GPT-4o to score each job 0-100 against the user's profile with explainable match reasoning.
- Engineered a company-research agent using Browserbase + Stagehand to autonomously browse a company's public pages and synthesize a structured interview-prep dossier with GPT-4o, with deterministic fallbacks so it never fails or hallucinates facts.
- Implemented AI resume parsing and PDF generation (GPT-4o + @react-pdf/renderer) and a PostHog-powered analytics dashboard with real-time stats and charts.
- Designed a layered architecture on InsForge (Postgres) with OAuth auth and Row-Level Security, enforcing strict boundaries between agent logic, server actions, and UI.

Echo AI – Voice AI Sales Coach Agent | *Vapi, WebRTC, OpenAI API, Node.js*

- Developed a real-time Voice AI sales coach that runs mock sales calls and helps representatives practice pitch delivery, objection handling, and closing workflows.
- Built adaptive coaching personas and performance prompts for role-play scenarios aligned with high-conversion sales conversations.

Quote Flow AI – Logistics Operations Console | *Next.js, TypeScript, Supabase, OpenAI, Vitest*

- Built logistics ops console for customer intake, AI-assisted shipment parsing, rule-based quote generation, and Slack-based approval workflows.
- Designed finite-state order workflow and deterministic mock database fallback to keep demos fully runnable; achieved 32 passing Vitest tests and Playwright visual captures across critical UI states.

RoofPost AI – Mobile Social Planner App | *React, Vite, Tailwind CSS v4, Express, Claude Vision, Railway*

- Built mobile-first app that analyzes uploaded roofing photos with Claude Vision and generates localized British English social captions.
- Integrated GoHighLevel Social Planner API scheduling, reducing a 15-minute content workflow to under 60 seconds; added bearer-token validation, per-IP rate limiting, and /api/health monitoring.

Hackathons & Awards

AGORA VOICE AI HACKATHON - BGC, Taguig, Philippines 2026

2nd Runner-Up

- Competed against 27 professional and student teams, building a real-time AI Conversation Arena prototype with Agora ConvoAI, TRAE IDE, and AWS infrastructure.
- Built **Parrot AI**, a voice AI agent that conducts realistic mock job interviews tailored to a candidate's resume and a target job posting.
- Designed automated interview scoring that pinpoints weak areas and delivers actionable feedback to help candidates advance to the next round.

PUP AI HACKATHON (UTHACK ANG PUHUNAN) 2024

Top 10 Finalist

- Co-developed **WasteLess AI**, an AI/ML-powered mobile app that helps users reduce food waste by finding practical ways to repurpose leftovers.
- Integrated computer vision and an AI API to identify food scraps from photos and generate tailored repurposing recommendations.
- Contributed to feature architecture research and rapid prototyping under strict hackathon time constraints.

Skills

Languages: TypeScript, JavaScript, Python, PHP, SQL, HTML/CSS
AI & LLM: OpenAI API, Anthropic Claude API, Google Gemini, AI agents, multi-agent orchestration, Model Context Protocol (MCP), retrieval-augmented generation (RAG), embeddings, vector search, Voyage AI, prompt engineering, structured outputs, Zod validation, LLM observability (Langfuse), voice AI (Vapi, Retell AI)
Frontend: React, Next.js App Router, Vite, Tailwind CSS v4, shadcn/ui, responsive web design, Core Web Vitals optimization
Backend & APIs: Node.js, Express, tRPC, REST APIs, webhooks, background jobs, bearer-token authentication, rate limiting, retry/backoff logic, health endpoints
Data & Cloud: PostgreSQL, pgvector, Supabase, MySQL, SQLite, AWS, Docker, Docker Compose, Vercel, Railway
DevOps & Testing: Git/GitHub, GitHub Actions, CI/CD, Vitest, Playwright, end-to-end testing, debugging
Automation & CRM: n8n, Make, Zapier, GoHighLevel, Conversation AI, SimPro, Slack, Google Workspace, automated email/SMS/WhatsApp workflows
